Drycleaner Site Profiles

[Admin](#)

These profiles provide details about remediation systems that have been installed and operating for one or more years at specific drycleaner sites in the United States and abroad. Data for these profiles have been provided by the point-of-contact listed and reviewed by SCRD's Project Management/Technical Issues Subgroup.

To the extent available, a consistent set of data is presented about each site. The intent is to provide users, particularly state officials, with information that can help them in making more informed cleanup-related decisions and, when possible, to provide pointers to additional information. The data included in each profile are site name, location, description, hydrology, type and level of contamination, remediation technology used, results achieved, costs, lessons learned, and point-of-contact for further information. A search engine allows users to enter key words and search all profiles simultaneously.

Profiles will be updated as new information is received. Remediation data on drycleaner site not currently in the database are always welcomed. Click on "Submit a Site Profile" below to input data drycleaner sites where remediation systems have been installed and operating for one or more years on-line.
